EDUCATION

University of North Carolina - Chapel Hill

June 2027

- ❖ **Bachelor of Science:** Computer Science + Mathematics, GPA: 3.8
 - **Notable Courses:** Linux Fundamentals | Software Engineering | Files & Databases | Discrete Mathematics | Linear Algebra | Introduction to Analysis | Differential Equations

SKILLS

- ❖ **Languages:** C, JavaScript, HTML5, CSS, Python, Java, Go (Golang), Perl, SQL
- ❖ **Frameworks & Libraries:** React, pandas, seaborn, matplotlib, Selenium, BeautifulSoup, Gorilla Websockets
- ❖ **Developer Tools & Platforms:** Bash, Linux, Docker, git, Google Apps Script

EXPERIENCE

Information Technology Intern, *Industrial Light & Magic (subsidiary of Disney)*

June 2025 - August 2025

Internal REST Tool

- ❖ Refactored +2,500 lines of legacy code, resolving +25 critical bugs, to refine error handling & system stability
- ❖ Engineered a data ingestion pipeline with Golang websockets, initializing a low-latency connection to a server
- ❖ Established +10 new endpoints for the core API, implementing functionality from the legacy codebase

Automated Outage Notifications

- ❖ Implemented an automated notification system using Google Apps Script for logging and communication
- ❖ Architected a global communication system that reduced incident response latency from >5 minutes to <30 seconds, based on direct analysis of user needs

Spatial & Physical Intelligence Lab, *UNC-Chapel Hill*

August 2024 - Present

Generative Editing Project

- ❖ Investigating existing AI image & video generation models to determine the use cases of generative editing.
- ❖ Utilizing Python, Linux, and the OpenAI API to test research projects relevant to AI video editing
- ❖ Collaborating with UNC PhD, Master's, and Undergraduate students for computer graphics research

PROJECTS

Beautiful Together Site, *Computer Science + Social Good*

August 2024 - May 2025

- ❖ Established a three-tiered permission service on the site's database with a data control language to protect from data breaches and enhance site security
- ❖ Integrated a backend service parsing 40-80 web pages to a new frontend, streamlining the user experience

Computer Science Experience Lab Chatbot, *UNC-Chapel Hill*

January 2025 - May 2025

- ❖ Developed a departmental chatbot (OpenAI API) to provide 24/7 support & reduce administrative workload
- ❖ Integrated an Angular frontend with a PostgreSQL backend for persistent user data storage.
- ❖ Coordinated a 4-person team, managing the full development lifecycle and delegating tasks.

CAMPUS INVOLVEMENT

Undergraduate Teaching Assistant: COMP 110, *UNC-Chapel Hill*

January 2024 - Present

- ❖ Mentoring +900 students in a Python course, leading office hours & debugging issues in Docker
- ❖ Designed with teaching faculty and peers to improve student satisfaction & performance further
- ❖ Recruited into a selective program with a <20% acceptance rate
